GrassCheck

Week beginning 8 August

Grass growth and quality measured from swards at Hillsborough and Greenmount

| Grass Growth (kg DM/ha/day)* | | |
|------------------------------|-----------|----|
| Previous 3 weeks | 8 August | 94 |
| Predicted | 15 August | 78 |
| | 22 August | 64 |
| | | |

^{* 270} kg N/ha/year applied

| Grass Quality | | |
|-------------------|------|--|
| Dry matter (%) | 14.9 | |
| ME (MJ/kg DM) | 11.6 | |
| Crude protein (%) | 18.3 | |
| Sugars (% DM) | 12.7 | |

Management notes.

- Growth rates are still well above average. Reasonable growing conditions are expected over the next two weeks and so growth rates, although declining, will remain above average for mid-August.
- Continue to ensure grass quantity and quality (2800-3000 kg/DM/ha) are optimised to maintain milk production.
- Where ground conditions allow, aim to get swards grazed down to 5-6 cms.
- Swards which were not grazed out during the previous cycle due to difficult
 ground conditions, round bale as soon as possible, as they are potentially going
 to be above the pre-graze target due to grass growth being above average. This
 will prevent grass being wasted and improve sward quality into the autumn.
