\*On-farm grass growth data supplied by Agrinet <sup>#</sup>GrassCheck plots receive 270 kgN/ha/year

## **MANAGEMENT NOTES:**

- Continued wet conditions over the past few weeks are causing a further decline in both grass growth rates and grazing conditions across the province.
- Poor conditions are also having a knock-on effect on grass quality with below average dry matter and metabolisable energy contents for this time of year. Although short-term weather conditions remain challenging, look for opportunities to clean out swards as this will ensure good animal performance from autumn grass.
- More information on the 2017 GrassCheck project will be on show at the AFBI Dairy Innovation in Practice farm walks taking place 12 -14 September. Visit **afbini.gov.uk** for more information and to register for the events.
